Experience

Full-stack Software Developer @ Ericsson *May 2020 – Present*
Montreal, Quebec, Canada

Develop in both frontend and backend of Ericsson Customer Emergency Handling software in a microservice environment using Angular, Spring Boot, and Apache Tomcat. Test, deploy, improve, and maintain the features to meet the stakeholder's needs. Collaborate with other teams to ensure product delivery of each release.

AR 3D Modeler @ WeThink Technology *May 2018 – Aug 2018*
Yunnan, Kunming, China

Worked on 3d objects modeling using 3ds Max. Implemented a customized Unity tool to generate AR object components in a scene from 3D data. Organized AR/VR technology exhibitions and events.

Education

Computer Science, McGill University -- *CGPA: 3.92*
September 2017 – (expected graduate in Aug 2021)
Dean's Honor List

Projects *(Please see my Portfolio and GitHub page)*

NeurIPS Reproducibility Challenge 2019
Participated in the Reproducibility Challenge @ NeurIPS. Reimplemented the baseline and the proposed algorithm in the paper: Learning Imbalanced Datasets with Label-Distribution-Aware Margin Loss. Improved the baseline accuracy by 12% to facilitate the authors' research.

Animated Character Creation Tool
This project is a tool that allows users to draw, pose, and ultimately create simple animated characters. Each keyframe of a 3D character can be easily posed using the interface. In the end an interpolated animated clip is produced with the character.

Heat Diffusion Simulation Application
Implemented an application to simulate the heat diffusion based on the method proposed in ACM Transactions on Graphics article. Deployed a heat conduction physics-based algorithm to update and render the geodesic distance.

Skills

- *Proficient in Java, Python, C++/C*
- *Limited proficiency in C# and JavaScript*
- *Experience in Spring Boot Framework and microservices architecture*
- *Experience in frontend development with Angular and TypeScript*
- *Proficient in relational database systems, SQL, and ORM libraries*
- *Knowledge in distributed systems and networks*
- *Familiar with multithreaded concurrent programming in Java and C*
- *Familiar with machine learning libraries (Scikit-Learn, PyTorch, Keras, NLTK,*

Languages

- *English – Full Professional Proficiency*
- *Mandarin – Native Proficiency*
- *French – Elementary Proficiency*
